

## G-SPOT ENHANCEMENT

'G' spot is the vaginal erotogenic zone, the "Gräfenberg zone" in the intervening tissue between the vagina and the urethra. The G-spot has been adapted by the medical communities and the public-at-large around the globe as a term for female expression of sexuality.

This area is augmented by the use of fillers so that the surface gets a better contact with the male shaft during intercourse. Increased nerve stimulation causes a better climax for the lady.

## HYMENOPLASTY

Hymen, a very thin film of tissue at the vaginal opening can be torn during sex or other physical activity like dancing, gymnastics, cycling injuries or using the tampons. Moreover not all hymens bleed when they tear for the first time, they don't "break."

Hymenoplasty procedure restores the integrity of the hymen and is very commonly called as the Revirgination surgery.

**Dr. Mohan Thomas**

Diplomate- American Board of Cosmetic Surgery (ID)

The Dr. Mohan Thomas Aesthetics is a World Class stand alone Surgical Facility. The design is geared to maintain absolute privacy, patient safety with the latest in Technology, sterilization, dedicated recovery rooms and well appointed step down rooms.

Our team of Super specialists provide all feel good services under one roof and headed by Dr. Mohan Thomas, one of the Top Cosmetic Surgeons in the World. He is American trained and Board Certified in Cosmetic Surgery.

His column in "Femina", for over a decade has over 6.5 lakh fans.

Dr. Mohan Thomas also has an 'Expert Column' in Bombay Times.

His book " Picture Perfect" launched by Bollywood Actor Tisca Chopra is very comprehensive and covers all aspects of Cosmetic Surgery and Medicine and is available at all leading book stores and online.

He is a Leading Academic Contributor to the World's Best Scientific Journals.

# INDIA'S BEST is also the WORLD'S BEST

Vaginal tightening by Surgery / Laser  
Labia Minora Reduction and Labioplasty  
Fat grafting of Labia Majora  
Liposuction of Mons Pubis  
Pubic lift  
Hymen Repair / Reconstruction  
'G' spot Enhancement

Self-esteem is intimately related to a person's perceived image about her genitalia. Self-esteem may be impaired if a person feels inadequate compared with a perceived ideal.

Cosmetic gynaecology is the recent breakthrough in the Aesthetic field that transforms female external genitalia appearance to look younger and more natural. Cosmetic gynaecological procedures correct the defects from giving birth, and help improve self-confidence and acceptance from others. Child-bearing trauma, aging and inherited irregularities affect not only the aesthetic look of the external female organs, but also create feeling of being different or inadequate. It can have an effect on the intimate relationship and women's emotions.

## WHAT IS VAGI LIFT?

Vagi lift laser vaginal tightening is the latest breakthrough in minimally invasive procedures to tighten the vagina and lift the bladder. Vaginal tissues lose their elasticity due to Childbirth, Weight loss, Surgery and Genetic Predisposition.

The side effects of vaginal tissue looseness include diminished sexual satisfaction from loss of friction and sensation as well as genuine stress urinary incontinence (leakage of urine with coughing, sneezing, laughing, or bearing down).

## HOW IS THE VAGI LIFT TREATMENT DIFFERENT FROM OTHER TREATMENTS?

Since Vagi lift does not require surgery or incisions, it represents a safer and faster solution that avoids the complications present in other vaginal tightening methods. This procedure is absolutely non-surgical and further sessions may be indicated.

Vaginal tightening with vagi lift is completed over two to four visits and you can immediately return to your normal everyday activities.

## VAGINAL REJUVENATION (VAGINOPLASTY)

Vaginal Rejuvenation is a general term that refers to surgical procedures to help tighten and support the vagina and to tighten the inside of the vaginal canal and the vaginal opening.

Vaginoplasty with or without a laser, is a gentle precision procedure with controlled accuracy that results in a relatively bloodless surgery. This involves taking out the excess inner lining of the vagina and tightening the vaginal muscles so as to create that snug feeling.

## LIPOSUCTION OF THE MONS

Some ladies have a genetic predisposition to have prominent mons which becomes very visible as a female crotch when wearing tight pants.

This can be addressed safely by Laser or Traditional liposuction at our Institute. This is a day care procedure and no pressure garments are needed.

## THE CLITORAL REGION

Cosmetic alterations in this region are focussed on a surgical intervention which transforms the clitoral prepuce to a more pleasing appearance with preservation of function.

A surgery for aesthetic motives is usually needed when the clitoral frenulum is enlarged, asymmetric or over-pigmented or any combination thereof.

The Clitoris when covered by a prepuce is called "Hodding of the Clitoris". This condition when corrected improves the sexual gratification.

## THE LABIA MINORA

Reduction labioplasty is the most common treatment for ladies dissatisfied with elongated, asymmetric or hyper pigmented labial tissue.

People with large labia minora usually complain of discomfort in the area when wearing tight under garments and during cycling.

We use the universally acclaimed wedge resection with flap transposition technique which accomplishes the following:

Reduces the size of the labia.

Preserves the natural edges, contour, shape, and colour sensation is maintained.

## THE LABIA MAJORA

Aging, giving birth, and inherited irregularity affect thick/hairy part of female external organ (labia majora). We have ways to transform the labia majora to a more youthful appearance by:

Rejuvenating labia majora by transferring your own fat to the desired areas. Sufficient amount of fat is harvested from the abdomen or thighs, live fat cells are separated which are then injected into the subcutaneous fat layer.
